

## Utility Type Definition Table

**Utility Type:** A code assigned by the CPUC based on the type of services that a telecommunications company is authorized to provide.

Utility Code	Utility Type	Description
CEC	Cellular Carrier	A wireless telephone company that uses cellular telephone equipment and is licensed by the Federal Communications Commission (FCC).
CER	Cellular Retail Reseller	A provider of wireless telephone service that does not own transmission facilities, but obtains communications services from another wireless carrier for resale to the public for profit.
CLC	Competitive Local Carrier	A wireline telephone company that competes with an already established local telephone company by providing its own network and switching.
CLR	Competitive Local Reseller	A provider of local landline telephone service that does not own transmission facilities, but leases at wholesale the landline facilities of another from another landline telephone company, and resells the service to the public under its own name.
IEC	Interexchange Carrier	A wireline telephone company that provides interstate (long distance) communications services within the U.S.
IER	Interexchange Reseller	A company that provides wireline interstate (long distance) communications services within the U.S. under its own name, but uses the networks of other service providers.
LEC	Local Exchange Carrier	A wireline telephone company that provides local telecommunications services under regulation within a specified service area.
PCC	Personal Communications Carrier	A wireless company that provides services such as paging, messaging, and data transfer.
RTU	Radio Telephone Utility	A regulated utility that provides two-way radio and paging services.
